A. One qubit, $\theta = 0.1$
Half diamond distance
10^{0}
10^{-1}
10^{-2}
10^{-3}
10^{-4}
10^{-5}
10^{-6}
Source distance from mixed state (exact)
Reverse decoder error (exact)
Every decoder: necessary error
10^{0}
10^{1}
10^{2}
10^{3}
10^{4}
10^{5}
Number of fresh collisions N
B. Necessary and sufficient budgets
Collisions to error 0.01
10^{7}
10^{6}
10^{5}
10^{4}
10^{3}
10^{2}
10^{1}
Source forgetting: $\Theta(\theta^{-2})$
Output recovery: $\Theta(\theta^{-4})$
10^{-1}
Collision action θ (radians)
