GW170817 open-data selection challenge: information gain is not a new scientific operation
Fourth detector adds conditional information
Known instrumental glitch survives gain robustness
Median 15.5×
Scalar information: HLVG / HLV
Tensor + breathing model; no vector modes
Same gain from ordinary weighted least squares
Frequency (Hz)
Known L1 glitch
Nominal calibration
Expanded calibration scenario
Mean null statistic, 50–500 Hz
Time relative to merger (s)
Diagnostic only: 32 s clips, 12 s estimated noise PSD, long-wavelength response. No astrophysical p-value or discovery claim.
